A: Surface - Late crude
domestic ware tiles
marble - dark soil

① same also marble
capital frag - probably

Byzantine - ground soft -
soil light brown loose

② hard mortar &
decomposed remains of buildings

③ floor (stone)

④ stone wall foundation

6 13 surface dark soil
① loose siliceous grey soil
late. rubble concrete
red ware, terracotta tiles (red)

② hard strata composed
partly of decomposed building materials
brown soil -

③ limestone walls, cupola one
up fairly well cut blocks.

4

5 rocks

6

④ stone wall, recent, quite 7 weeks

⑤ rocks

surface dark soil loose -

⑥ loose soil mixed with pieces
of rock - late red ware - terracotta
ware - tiles - found 6 to 10 cm at
a depth of 155 cm. soil light
brown - also marble found in
small pieces -

lines within these.
Diameter about 0.36

irreparable reddish brown four
4.

Tomb 186.

133

Stratum A.

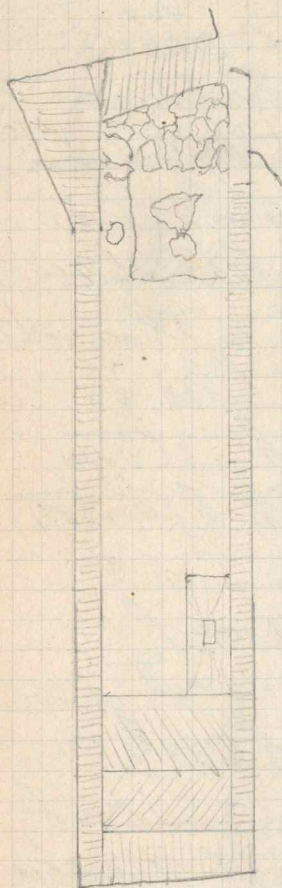

Skeleton w. head pointed toward
entrance. Slings missing -
probably taken away by someone
entering on north side.

There is a marked change in
the stratification on the north
side of Tomb. Also, on
floor B of Tomb stones
are found (see p. 129) (photos
p. 126 & 4' 4" 5'.)

Skeleton on floor B is
pointed toward west. (Woman)
Note (p. 129) one foot rests on
stone. Conclusion: Tomb
found & cleaned to make
room for someone else or
another floor or entrance
to another tomb below
this floor of which
cont 135

13⁴ TOMB 23

20

the stones in floor 15 135
 from the top. They may
 lie in their original place.
 These stones may, however,
 be an entrance to another
 tomb on the same level
 as B, and the upper stones
 may be representing simply
 because they were removed
 by those who may have
 cleaned the tomb out for
 someone else. Then these
 people placed the new
 person to be buried w. one
 leg resting on one of the
 stones. Just S. of the 2nd
 place where the skull should
 have been is the jaw of
 what may probably be
 a dog.
