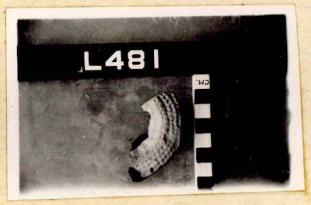
L 481 Terracotta Lamp Type XXVIII



Roll 6

Max. dia. at least 6.5cm. H. at least 2.6 cm

Only part of rim, discus, side and nozzle preserved. One p.

~~Shape~~ Clay gray-brown, and in places, thin.

Shape ovular. Rim separated from discus by ridge with depressed dots. Three rows of dots on rim. Outer two may represent herring-bone. In discus, rosette, with hole, off-center.

Curium, Palace
ninth layer of cellar of Room O
21 April 1949, SF no. 6
Fales, NB LV, p. 97

L 482 Terracotta Lamp Type XXVIII

Roll 6

Only Max. dia. about 6.8cm.

Only handle with part of rim and discus preserved. one.

Clay reddish inside, outside, buff. Rough.

Shape circular. Rim between two ridges incised herring bone, pointing away from handle. Discus rosette with circular line around about half way between bottom and top. Lines sharp. Hole in center. Handle triangular.

Cyrium, Palace
9th layer of cellar of Room O
21 April 1949, SF. no6
Fales. NB. IV, p. 97

L 483 Terracotta Lamp Type XXVIII

Roll 6

Only part of discus and rim preserved.
Clay grey but with traces of ~~black~~ black as if from fire.
Shape circular. Rim set off from discus by small depressed marks. On rim, traces of two depressed lines. In discus, erotic symplegma. Figure leaning against a support, holds another with his hand another who straddles his legs and places his hands around his neck. In back of this second figure, a third another who places his hands under arms of second. Hole of discus behind third figure.
