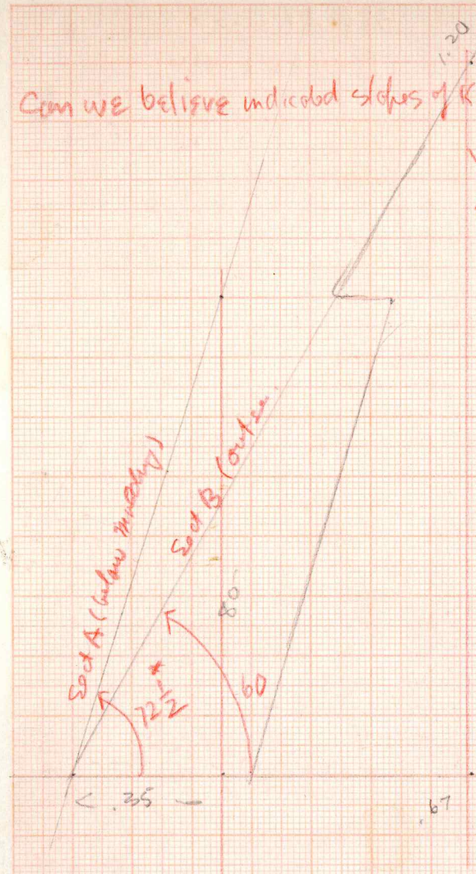
Terrace excavation
K-5 staircase.

Can we believe indicated slopes of K-5-4th's?



Yes 72° conforms with my 78° for K-5-3d basal terrace (God draws 76°); 4th I was struck by the flatness of K-5-4th's slope. My sketch of Section B indicates that wall below moraine was steeper than the moraine, which had same slopes as outset.

This 60° slope (includes 6-0 steeper if we could average) not subject to distortion in settling as about 10° flatter than basal terrace estimated slope of R-9.

cf. 69°.20 base of Stk R-9

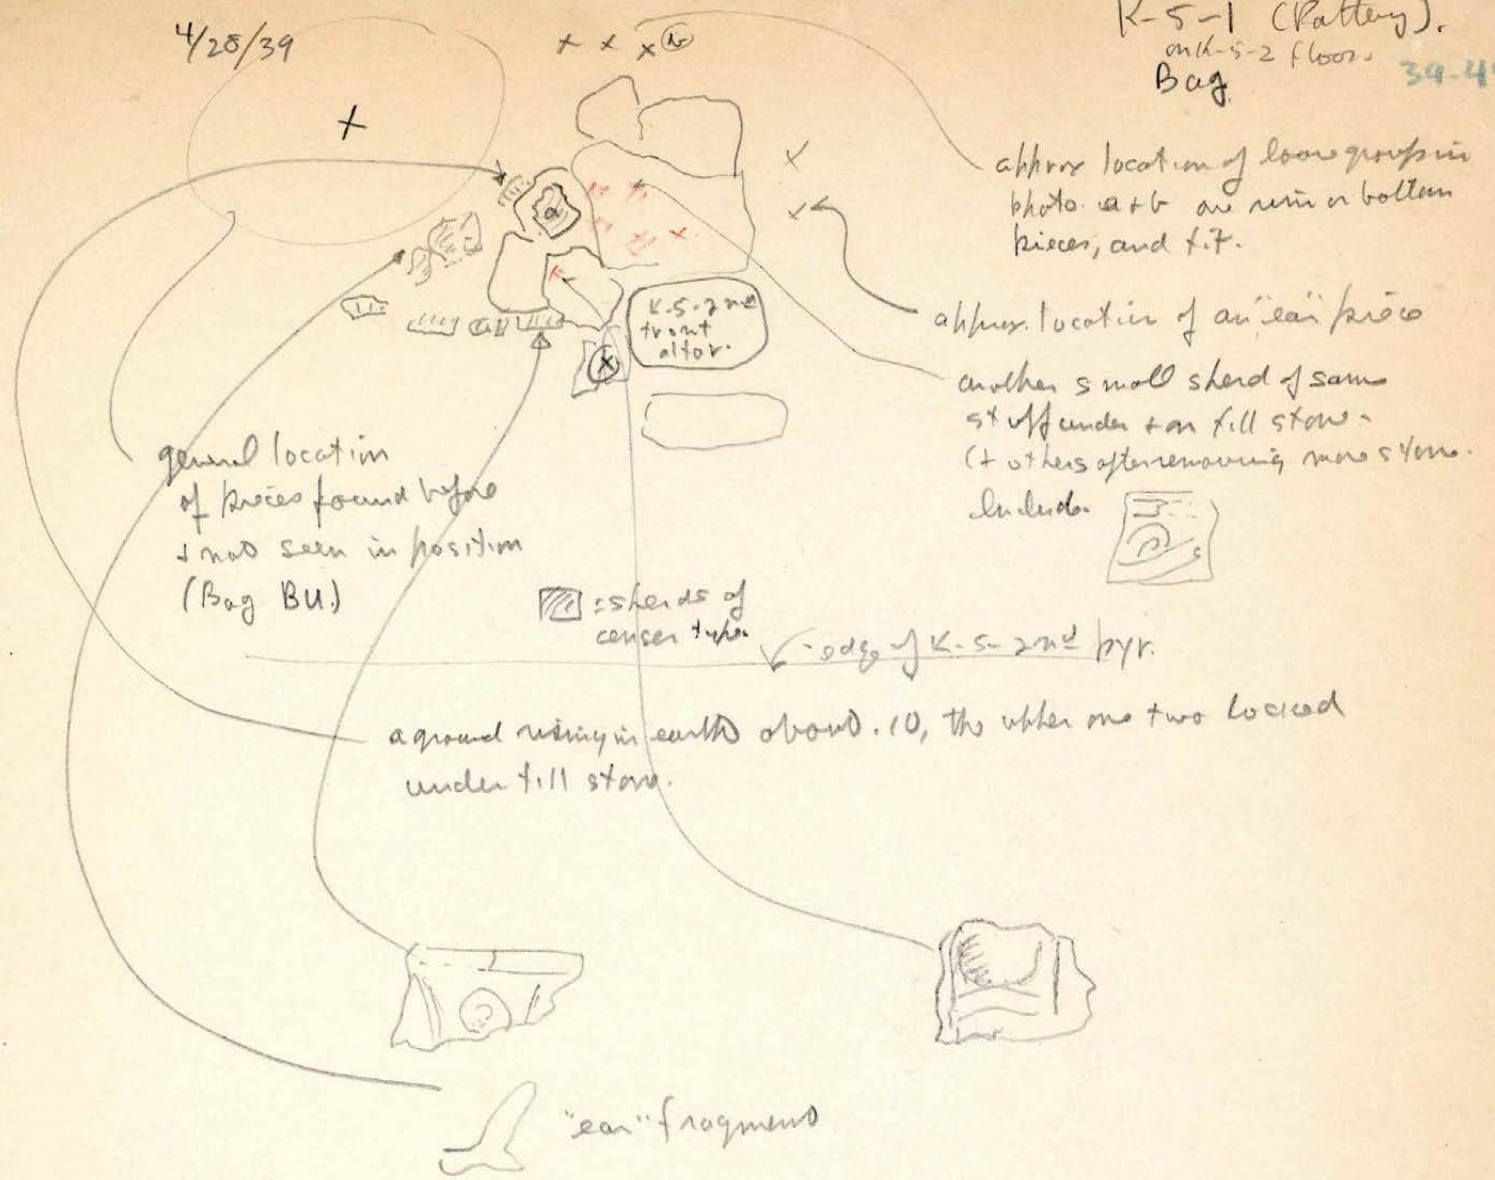
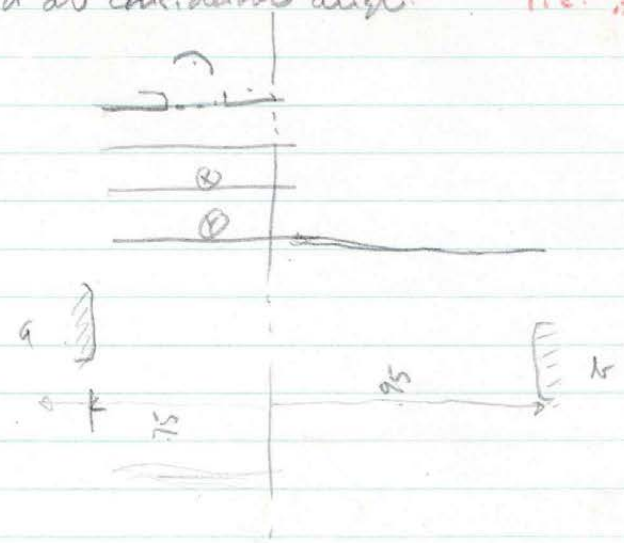
K-5-1 (Pottery).
on K-5-2 floor.
Bag 39-49



about 1/2 ~~the bulk~~ of sherds of this bag came from the area just behind the right half of the altar, below fill stones and above ~~or~~ and on some bed stone of the floor; the floor was poor + shaky but definitely certain. A little to one side plaster occurred on the floor level, though free down behind the left side of the rear of altar, the loosened stone of fill wall had moved floor. Probably the olla was placed after the fill wall began (or most of its sherds), ∴ the concentration behind the fill wall. If Amelia is wrong in attributing an "ear" piece to outside the fill wall this would be sure (the other bag ~~was~~ were all from inside) so. If he is right, an ear piece got outside after the fill wall started. Alternative - dumping of sherds + breaking of pots. Even this showed a clear after begun the fill + niche walls. Two small stones x were laid against right side of altar as if to hold it + no sherds were under them, though others very close.

May 20 K-5-1 Burial Terrace cache

Fragments of cover sliding off forward from - had clearly been in position. 1 piece same distance to right & below - of it & its (via another socket) Cache center .32 right of K-5-2nd center axis. (as determined at this time, leans forward at considerable angle. i.e. .32 right of N-S of Pit 118



a & b very uncanny suggestion of cist walls N. 1st cut, a - 2 - a larger & smaller above Pat no continuous Big fill at level of top of step

Pat rests on rough fill stones - several small snail shells below it; ~~obsidian + flint~~, obsidian below it.

NB (May 16:) - Cache was about .20 right of subhead main stairway centerline projected; this was done with basis & beam as follows

Plan - biased lines joining K-5-2nd stairway side walls at terraces C & D (inner angles) and noting where it cut base line (on plan). Then swung from two points on base line ← axis
